Amada Pulse Cutting Bandsaw Machines Fully Lined Up
“PCSAW430AX” and “PCSAW530AX” launched

At the International Manufacturing Technology Show (IMTS) 2008 in Chicago, Amada Cutting Technologies, Inc. (Los Angeles, California) has launched new bandsawing models “PCSAW430AX” and “PCSAW530AX.” Amada had developed their original revolutionary technology, **DOUBLE PULSE CUTTING** and embarked on a line of products, “PCSAW Series” in 2006. The addition of these two models completes the Pulse Cutting Bandsaw Machine Full-Lineup.

“PCSAW Series” were developed to eliminate inherent problem such as noise, vibrations, and cutting resistance thus producing the highest efficiency ever in metal bandsawing. Ever since Amada introduced a double pulse cutting machine, “PCSAW700” (cutting capacity: 28”) and a single pulse machine, “PCSAW330” (cutting capacity: 13”) at the IMTS2006, they had been working to enhance the line to answer the markets’ requirements for a complete range of capacities.

The single pulse cutting machine, “PCSAW430AX” is capable of cutting material size up to 16” and another single pulse machine, “PCSAW530AX” is capable of cutting up to 21”. These two models were developed under the concept of “High-Cutting-Rates, Low-Cost, Earth-Friendly, and Safe and Efficient Working Environment.” Amada has succeeded in making many improvements such as dramatically reduced cutting noise, kerf loss or material waste, just to name a few.

Further improvements of efficiency and productivity are now a reality by the introduction of the newly developed Amada carbide tipped bandsaw blade “AXCELA” at the IMTS2008.
